INTAKE

Large brown pitbull roaming the Premier On Woodfair apts

BEHAVIOR NOTE

While in the outdoor run, Ace was fixated on a large husky that was 5 runs away from his. The husky was not paying any attention to Ace, but Ace had his hackles raised, barking and wouldn't take his eyes off the husky. When I went to bring him back inside, he sat and waited for me to leash him with a tense open mouth. As soon as I opened the door, he ran straight for the husky's run. In doing so, he swung my wrist hard into the gate causing some bruising. I held on tight to the leash so he wouldn't get away from me and he kept pulling until he was on his hind legs and still continued to pull. I tried talking to him and pulling on him and throwing treats but he was not responding to anything. I had to walk away from the Husky's direction until he finally broke his fixation and followed me. Placing him on Adopt Eval.

BEHAVIOR NOTE

When I approached the kennel, Ace was laying down in his Kuranda bed. I opened the door and he approached me with a wiggly body and loose open mouth. I leashed him and he walked on a semi-loose leash to the outside runs. While outside he was running around with a tense body fixating on other dogs. He was fixated on the dog next to him when I went outside to retrieve him. I broke his stare by throwing treats on the ground. He then had tappy feet, waiting for me to leash him. I leashed him and he turned around to look at the neighboring dog with a tense body, but I made a quick tug on the leash and threw some treats down and he walked away from the neighboring dog. He walked back in on a loose leash.

BEHAVIOR NOTE

greeted me by kennel door with a wiggly body, fast wagging tail and losoe open mouth and tongue. as i was attempting to leash he kept jumping up on his kennel door and play bowing. once leashed he walked on a tight forward leash while igoring trail of treats. as we approached his clean kennel he stopped by his door and began pulling back on the leash. was able to get him in while he attempted to push past me.

BEHAVIOR NOTE

greeted me with a waggy tail and body and was tap dancing. When walking, dog kept a loose leash and seemed wiggly and presented play bows. When in the runs, dog tends to try to play with other dogs. It does bark and run.

BEHAVIOR NOTE

Move Adopt 4/16/2024 : I walked towards the run that he was in and saw him notice me and run to the back corner. I began talking happily as I reached the door. I walked in and he began looking behind him at the fence, and running to the other corner. I walked slowly towards him and presented the leash. When I attempted to leash him, he shook the leash from around his head. I offered a soft meaty treat from my gloved hand and he extended his neck to sniff it but backed away . He held a tightly closed mouth and a slighty trembling body. I began to take backwards steps, walking with only my back facing him. I loosely placed the leash around his head. I walked him out of the run and towards the building. When we approached the door, he began to resist and pull backwards. He walked into the office after opening the door wide, and he covered. He smelled as if he had a wound somewhere so I began looking him over. He was trembling and kept darting forward. I walked him to his kennel and placed treats on the floor as I walked out.

BEHAVIOR NOTE

Dog was laying on the outside of his kennel when citizens walked through the inside of the building. When he heard them he stood and began barking constantly, facing his doggy door. He stayed on the outside barking until distracted. Covered outside also.

BEHAVIOR NOTE

Approaching kennel Bandido was laying in his bed. Once leashed he had a wagging tail and relaxed body, On the leash he held a loose leash and wagging tail. At the grassy area he potties and begins to kick grass far behind him with a tense body and paws digging in the grass. Hesitant to walk back in kennel I walk in first and he follows. I tossed treats towards the back, he ate the treats and stayed towards the back of kennel.

Eval. Notes:

INTAKE

A STRAY OLD SKINNY GRAY MED DOG ON COH PROPERTY

BEHAVIOR NOTE

Approaching kennel dog had dilated eyes and seemed tense. I slowly entered and got up slowly and started to slowly wag tail. He walked well on the leash with a loose body and wagging tail.

BEHAVIOR NOTE

Approaching kennel, dog was laying down. He saw me and then quickly got up and started to slowly wag tail. I easily leashed him and he walked out loosely with relaxed body. I took him outside and he just sniffed around and went potty. Coming back inside, he easily went into his new kennel.

BEHAVIOR NOTE

Dog has been very still on the outside of his kennel. Treats placed on his bedding yesterday, prior to returning from surgery, remain untouched. Food untouched. When approached, he curls tightly, keeping head against the floor. He avoids eye contact as I try happily talking to him. Kennel clean and dry ; medication untouched on the top of his food bowl.

BEHAVIOR NOTE

Update from AM 04/09/24 15:39: During PM feed, I offered wet food to Diesel on the outside portion of his kennel. He has been on this side all day. When he approached the wet food, he gobbled it quickly, smearing some of it on his E-collar. I later returned to his kennel and he was sitting up on his bottom. He stood, swaying his tail when I began talking to him. I leashed him and walked him out to the grass to potty. He walked hurriedly, as if searching, also making large circles around me in the grass. He eventually pottied and I returned him back to his kennel. I placed him on the inside portion where his bowl filled with kibble and medication was. He immediately began eating the food.

BEHAVIOR NOTE

When approaching kennel he greeted me at the front of kennel with a slow wagging tail, placed leashed on him and as we began walking he walked on loose leash to the runs. Later when going to retrieve him from the runs he was patiently waiting by the front of gate, I then walked him back inside on loose leash to his kennel. Throughout the day he remained quiet laying on his bed.

BEHAVIOR NOTE

Approaching kennel, Diesel was curled up in his bed. Once he heard me opening kennel door he got up with a relaxed body, closed mouth and a low tail. While walking he held a tight leash, I noticed that the cone around his head bothered him. He began to shake his head and scrape the cone on the ground. In the runs Diesel was able to get the cone off and was roaming around the run. As I was putting the cone back on he remained with a relaxed body and squinting eyes. After returning back to his kennel Diesel walked right in and stayed at the door, he held a low tail and low head.

BEHAVIOR NOTE**BEHAVIOR NOTE****BEHAVIOR NOTE**

approaching kennel, diesel is laying in his bed, lifts head and looks up to me while laying in his bed. I slowly open kennel door and he continues to lay in bed up until I leash him and he walks out on a loose leash out to outside runs. ignored other dogs in outside runs.

BEHAVIOR NOTE

Approaching kennel, Diesel came to me with a wagging tail low hanging tail and neutral body as I babytalked to him and offered treats. Dog walked gently on a loose leash on the way out until he pottied and would take the meatier treats on the way back to his kennel holding a relaxed body.
