

Maintenance of Esplanades in City Right-of-Way

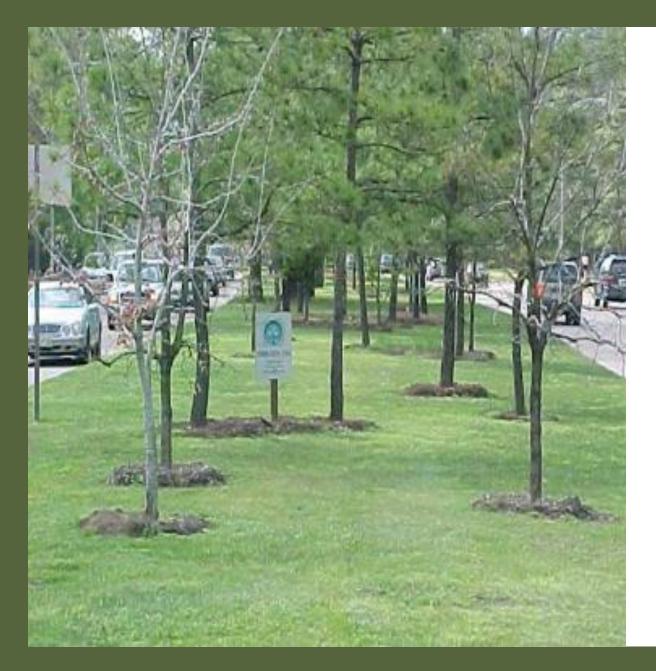

Other than Section 32-4 in City Ordinance, HPARD finds no instrument that explicitly conveys the maintenance responsibility for esplanades to the Parks Department.

Sec. 32-4. - General duties of director.

It shall be the duty of the director to direct, control and manage all parks, parkways, **esplanades**, trails, playgrounds and recreation buildings and other improvements on park and playground property belonging to <u>or under the control of the city and such other grounds as may be placed under his control</u>, from time to time, by the mayor and city council, and to direct the improvement and maintenance of all such properties.

The composition of the HPARD maintenance inventory for esplanades is as follows:

- 1,550 acres of maintained esplanades, plus
 950 acres of adopted esplanades for a total of
 2500 acres
- 800 linear miles of maintained esplanades
- 7,000 esplanade islands maintained
- The island size can range from .1 to 4.3 acres

Maintenance Standards Goals and Practices

- Mow and de-litter every 30 days
- Bermuda release program broadcast herbicides twice annually to control seasonal weeds and to slow the growth of turf grass.
- Install and maintain linear forests as funding and sponsors become available

Typical Esplanade Mowing Routine – each site in 30-day intervals

Windshield time varies and can significantly impact production due to factors such as: traffic and distance between sites.

1. Crew arrives at site

Site may contain up to 20 esplanade units

More resources may have to be called in to haul debris when the load exceeds the trailer capacity

or wide mowing surfaces, heavy traffic

Wide esplanades may be mowed by tractor.

^{5.} Tosses trash bags, limbs and other debris onto trailer. Re-loads equipment. Moves to next site, or takes bags to nearest facility dumpster

^{2.} Parks & secures vehicle, unloads equipment

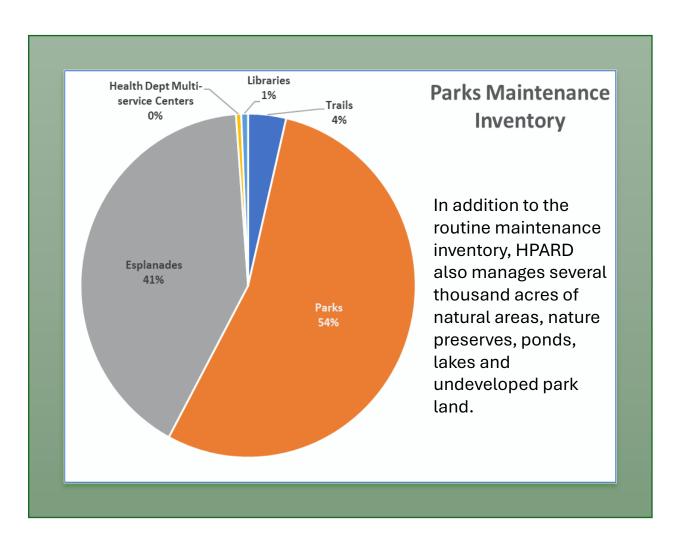

Unload/reload generally takes up to 15 minutes

Factors that increase maintenance time: maneuvering around trees, heavy litter, narrow

^{4.} Mows, trims around stationary objects, edges the curb, blows clippings away from storm drains

3. Removes trash, litter and debris

The same staff members that are assigned to maintenance crews for routine work must also perform non-routine work with the small Natural Resources Management team on a variety of grant-funded conservation projects.

Resources

- Estimated Annual Operating Cost = \$5.65M
- Staffing (15 crews) Each geographic maintenance district has at least 1 dedicated esplanade crew. Districts that have large esplanade inventories may have 2 crews. Seasonal Laborers supplement the regular crew during the peak mowing season.
- Vehicles crew cabs, trailers, pick-up trucks, riding mowers, tractors, herbicide tanker trucks, curb dressers
- Equipment -string trimmers, backpack blowers, pole saws, stick edger
- Materials and Supplies -picks, trash bags, PPE, fuel, herbicides

Esplanade Maintenance Challenges

- Inventory grows without additional funding as road construction/reconstruction projects add
 - new units where they did not previously exist
- High turnover in staffing
- Safety (traffic, etc.)
- Storm cleanup
- Aging equipment
- Broken windshields (cost of doing business)
- Excessive litter especially in concentrated retail areas
- Irrigation lines water use, repairs, etc.
- Illegal dumping (commercial contractors, private citizens)
- Equipment damage (curb jumping is hard on trucks and mowers)
- High priority requests to trim trees that block traffic line of sight
